

ULTRA SEAL

Dual Pad Plunger

Engineered to Excel Where Other Seals Struggle

The Ultra Seal Dual Pad Plunger offers the most advanced sealing mechanism in today's market.

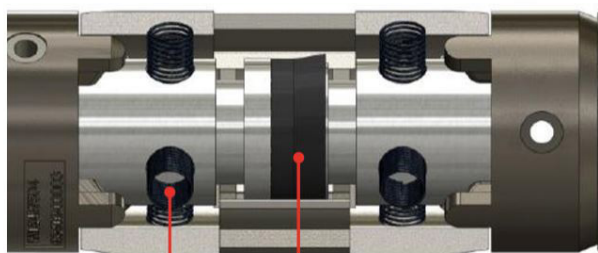

The key to success is an HNBR runner seal attached to the body between the tabs. The interlocking tabs serve as a protector to the Ultra Seal, which decreases gas slippage under the pads. The result is less fluid fallback during the plunger cycle, therefore less pressure to make a run.

Tubing Sizes

- 1-1/2" to 2-7/8"

BENEFITS & APPLICATIONS

- HNBR seals
- Unique 4-piece pad design
- Inconel springs
- Ability to perform in highly deviated wells
- Less fluid fallback during plunger cycle with increased fluid and gas production
